**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-43, drawn to apparatus, classified in class 118, subclass 728.
- II. Claim 44-52, drawn to method, classified in class 437, subclass 427.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus (microfeature work piece processing system) as claimed, can be used for etching process.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Further, inventions of claims 1-27 (microfeature workpiece holder) and claims 28-43 (microfeature workpiece processing system) are related as subcombinations disclosed

Art Unit: 1763

as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of claims 1-27 has separate utility such as in a loadlock chamber where no chemical processing takes place, and invention of claims 28-43 can be used for heating or cooling wafers in a chamber. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for the sub-combination - microfeature workpiece holder, is not required for sub-combination - microfeature workpiece processing system, restriction for examination purposes as indicated is proper.

Additionally, within the sub-combinations (microfeature workpiece holder and microfeature workpiece processing system), this application contains claims directed to the following patentably distinct species of the claimed invention:

Species under sub-combination (microfeature workpiece holder):

Species 1: Figures 4-8.

Species 2: Figure 9

Species 3: Figure 10-14

Species under combination (workpiece processing system):

Species 1: Figure 15

Species 2: Figure 16

Species 3: Figure 17

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently claim 27 appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the Group (I or II), sub-combination and the species that are elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
